

## About Butea Superba

Butea superba is a herb in the family Papilionaceae and has the characteristics of being a crawling vine that wraps itself around large trees. One branch has 3 leaves. The flowers are of a yellowish orange color and the plant grows in the open.

The long roots of the plant are buried under the ground, similar to the roots of a yam. This type of plant reproduces through seeds and the separation of its roots. This plant can be found growing in forests in the Northern regions, in the Eastern regions and along Kanchanaburi Province, of Thailand.

The roots and stem of the plant are medicines used for strength and power. In addition, the roots and stem of the plant are considered to help increase male sexual performance. Thus, this plant has come to be known as a miracle herb. Since Butea superba helps to enhance human health, it was considered to be an essential factor to entity the chemical constituents of this herb.
